

# **PROJECTIS SX4 BLOCKCHAIN LEDGER**

**The SX4 Blockchain Ledger is the only OFFLINE  
blockchain technology for a high-security, fast and  
immutable listing of files of all types**

## What does SX4 do?

SX4 converts your digital documents, photos or files in an algorithmic fingerprint expression also known as “hash”. It then binds the hashes of your archive together in an immutable chain and creates a separate block for each. Thus creating a blockchain which also becomes a searchable ledger.

## How does it work?

In most cases, copy-paste to a desktop folder and run SX4 with a single command.

Alternative use of manual and bulk modes is possible. One picks up where the other one stopped.

## System configuration

A laptop running Microsoft Windows is sufficient to run SX4 BLOCKCHAIN LEDGER.

## What makes SX4 unique to other Blockchains?

SX4 can run **OFFLINE** which is a unique feature of our Blockchain. The benefit of this is that no document ever travels on the internet when archived therefore ensuring complete confidentiality. Another is that it can be **PAUSED**, minimizing the carbon footprint.

## And why blockchain?

A blockchained archive is immutable in content and structure. A un-blockchained one is not and can be tampered with, including by AI. This is the short answer. Contact us for more details.

## How fast is it?

1000 files hashed and listed on the blockchain ledger under 7 minutes with a base laptop. Faster on larger configurations.

## How easy to set up?

Half a day on average, or less.

## How fast to restore ?

A few minutes if you followed our day one initial back up instructions

## How is SX4 acquired?

With a one-off license from PROJECTIS. No use time limit or recurring fees...unlike other block-chains.

## Can it be tailored to our needs?

Yes, at a cost related to length and complexity.

## Use for:

- COMPANY DOCUMENTS
- REGISTER OF SHARES OR CERTIFICATES
- MUSEUM ARCHIVES
- FAMILY ARCHIVE
- ONSITE PHOTO-SHOOT RECORDINGS
- PHOTO COLLECTIONS
